2018 Essential Health Benefits Enhanced Formulary

Effective July 1, 2018

For the most current list of covered medications or if you have questions:

Call the toll-free member phone number on your ID card.

Visit your plan's member website listed on your ID card to:

- Locate a participating retail pharmacy by ZIP code.
- Look up possible lower-cost medication alternatives.
- Compare medication pricing and options.

Understanding your formulary

What is a formulary?

A formulary is a list of prescribed medications selected by your plan for their safety, cost and effectiveness. Medications are listed by categories or classes and are placed into cost levels known as tiers. It includes both brand and generic prescription medications approved by the U.S. Food and Drug Administration (FDA).

Your formulary utilizes a Pharmacy and Therapeutics Committee made up of practicing physicians, pharmacists, and nurses to help ensure that your formulary is medically sound and that it supports patient health. This committee reviews and evaluates medications on the formulary based on safety and efficacy to help maintain clinical integrity in all therapeutic categories.

About this formulary

Where differences exist between this formulary and your benefit plan documents, the benefit plan documents rule. This may not be a complete list of medications, and not all medications listed may be covered by your plan. Please look at the benefit plan documents provided by your employer or plan sponsor for full details.

How do I use my formulary?

You and your doctor can consult the formulary to help you select the most cost-effective prescription medications. This guide tells you if a medication is generic or brand, and if special rules apply. Bring this list with you when you see your doctor. If your medication is not listed here, please visit your plan's member website or call the toll-free member phone number on your ID card.

The OptumRx formulary uses medical and utilization management functions to determine whether a prescription is medically necessary. These industry recognized and accepted management functions include but are not limited to: quantity limits, step therapy, and prior authorization. They help OptumRx and its clients determine whether the medication was prescribed in accordance with generally accepted medical practice standards, if it's clinically appropriate, and confirm that the prescribed medication is not more costly than an alternative product that is as likely to produce therapeutically equivalent results. As recommended by the United States Department of Labor, OptumRx has reasonable medical and utilization management functions which apply to ACA preventive drugs. To learn more about a pharmacy program or to find out if it applies to you, please visit your plan's member website or call the toll-free member phone number on the back of your ID card.

What are tiers?

Tiers are the different cost levels you pay for a medication. Each tier is assigned a cost, determined by your employer or plan sponsor. This is how much you will pay when you fill a prescription.

Understanding your formulary

When does the formulary change?

- Medications may move to a lower tier at any time.
- Medications may move to a higher tier when a generic equivalent becomes available.
- Medications may move to a higher tier or be excluded from coverage on January 1 or July 1 of each year.

When a medication changes tiers, you may have to pay a different amount for that medication.

Why are some medications excluded from coverage?

A medication may be excluded from coverage under your pharmacy benefit when it works the same as or similar to another prescription or over-the-counter (OTC) medication.

What if I don't agree with a decision about an excluded medication?

You (or your authorized representative) and your doctor can ask for an initial coverage decision by calling the toll-free member phone number on your ID card.

Medication tips

What is the difference between brand-name and generic medications?

Generic medications contain the same active ingredients (what makes the medication work) as brand-name medications, but they often cost less. Once the patent for a brand-name medication ends, the FDA can approve a generic version with the same active ingredients.

What if my doctor writes a brand-name prescription?

If your doctor gives you a prescription for a brand-name medication, ask if a generic equivalent or lower-cost option is available and could be right for you. Generic medications are usually your lowest-cost option.

What if I am taking a specialty medication?

Specialty medications treat rare or complex conditions and are typically higher cost medications. Please note, not all specialty medications are listed in the formulary. BrivoRx®, the OptumRx specialty pharmacy, can provide most of your specialty medications along with helpful programs and services. Call BrivoRx and have your prescriptions delivered right to your home or doctor's office.

Over-the-counter medications

An OTC medication may be the right treatment option for some conditions. Talk to your doctor about available OTC options. Even though these medications may not be covered by your pharmacy benefit, they may cost less than a prescription medication.

Reading your formulary

The formulary gives you choices so you and your doctor can determine your best course of treatment. In this formulary, brand-name medications are shown in UPPERCASE (for example, CLOBEX) and generic medications in lowercase (for example, clobetasol).

Tier information

Using lower tier or preferred medications can help you pay your lowest out-of-pocket cost. Your plan may have multiple or no tiers.

Drug Tier	Includes	Helpful Tips
Tier LC	\$ Lower Cost Generic	Use Tier LC drugs for lowest out-of-pocket costs.
Tier 1	\$ Generic	Use Tier 1 generic drugs, instead of brand name drugs, to help reduce your out-of-pocket costs.
Tier 2	\$\$ Preferred	Preferred brand-name drugs will generally have lower co-payments than non-preferred brand-name drugs.
Tier 3	\$\$\$ Non-Preferred	Many Tier 3 drugs have lower-cost options in Tier LC, 1 or 2. Ask your doctor if they could work for you.
Tier 4	\$\$\$\$ Generic Specialty and Preferred Brand Specialty	Tier 4 is generally next highest in co-payment and cost. These drugs are sometimes used to treat complex and chronic conditions and may require special monitoring or handling.
Tier 5	\$\$\$\$\$ Non-Preferred Specialty	Tier 5 is generally highest in co-payment and cost. These drugs are sometimes used to treat complex and chronic conditions and may require special monitoring and handling.

Drug list information

In this drug list, some medications are noted with letters next to them to help you see which ones may have coverage requirements or limits. Your benefit plan determines how these medications may be covered for you.

M	Authorized generic or co-branded product
PA	Prior Authorization – Your doctor is required to provide additional information to determine coverage.
PV	Preventive drugs – May have coverage and no co-payments when health care reform requirements are met.
PV*	Preventive drugs – Available at \$0 if prior authorization is approved.
QL	Quantity Limit – Medication may be limited to a certain quantity.
ST	Step Therapy – Trial of lower-cost medication(s) is required before a higher-cost medication can be covered.
